

Health check: Is your air conditioner performing it's best?

Servicing of your air conditioner plays an important role to keep your unit efficient, safe and free from debris.

As your unit is running, it is sucking air from within your house or office. Whilst this environment may feel free from dust, you will be surprised how much can be present. This dust can completely restrict the air conditioner and create a dangerous situation for excessive heat build-up. Not only will this save you money on your running costs, it will reduce premature failure of the unit and increase the hygiene within your premises.

We undertake the following checks:

- Correct refrigerant pressures
- Blocked condensation drains
- Clean filters and spray with disinfectant
- Free the outdoor unit from leaf and animal hair buildup
- Check correct operation of remote control
- Tighten electrical connections
- Load test the unit

How do I book a service?

Call 1300 800 327 or visit eas.trade/contact

Need an air conditioning system installed instead?

Contact us today to hear more about our half price air conditioning installation special. Call **1300 800 327** or visit us at **eas.trade** to find out more.

Health check: Is your solar system performing it's best?

Perform a solar health check to ensure your system is safe and working correctly

By understanding how many panels you have installed, how they are wired, and their electrical characteristics, eas can assess if there is a problem in the wiring, a panel problem or inverter malfunction. We will check grid voltage and parameters to make sure inverter isn't switching off during the day, isolator integrity, and load test the currency to know all joins and panels are safe.

All this adds up to knowing if your PV System is safe, working correctly or a recommendation is put forward to help rectify.

Why use eas solar

- Winner Master Electrician Awards for Energy Efficient projects (2017 and 2018)
- Operating in the solar industry for 10+ years
- Locally based, family operated SA business
- Unrestricted electricians with solar design and install capability (including grid connect and off grid battery certification)
- We have installed over 3mW of rooftop solar
- Experience with many brands of panels and inverters
